

2025 Environmental Dashboard: Peterborough (Beryllium)

At BWXT Nuclear Energy Canada's (BWXT) Peterborough facility, air and water emissions are measured for the presence of beryllium. Beryllium is used as part of the fuel bundle manufacturing process.

Airborne and liquid effluent discharged from a fuel fabrication facility like BWXT are regulated by concentration limits. Action Levels and our own internal limits are set at just a fraction of the Licence Release Limits, which are set by the Canadian Nuclear Safety Commission (CNSC), to keep public exposure to keep emissions as low as possible. Although Action Levels are set below Licence Release Limits, exceeding an Action Level is considered a CNSC reportable event in which BWXT must notify the Commission within 24 hours of becoming aware that an Action Level has been exceeded. Accordingly, BWXT has established Internal Control Levels for various radiological and environmental parameters that are set even lower than Action Levels to act as an early warning system. An Internal Control Level exceedance results in internal investigation and corrective and preventive action.

Water: Wastewater is generated from equipment use and cleaning activities in the beryllium classified zones. Water passes through a weir settling system prior to release to the sanitary sewer. Regular sampling of the beryllium wastewater is conducted via a 24-hour composite sample taken from the outflow lines which is sent for analysis externally by an independent laboratory. The minimum detectable concentration is 0.007 µg Be/L (0.000007 mg Be/L or parts per million (ppm)). The Internal Control Level is 4 µg/L, the Action Level is 40 µg/L, and the Licence Release Limit is 26 mg/L.

Air: The facility performs continuous in-stack monitoring of three beryllium air emission points, drawing a sample of air across a filter capable of trapping beryllium. The filter is analyzed for beryllium at an external laboratory. The Internal Control Level is 0.01 µg/m³, the Action Level is 0.03 µg/m³ at the stack exit, and the Licence Release Limit is 2.6 µg/m³ which are both very conservative.

To continue to demonstrate transparency and provide information to the public, BWXT has developed this Environmental Dashboard to provide more detail on our low emissions. This document will be updated throughout the year when new data becomes available.

For more information, please visit the [Environmental Monitoring](#) page of our website or refer to our Annual Compliance Reports, a thorough document submitted to the CNSC annually, which can be found on our website [here](#).
