## 2025 Environmental Dashboard: Peterborough (Uranium)

At BWXT Nuclear Energy Canada's (BWXT) Peterborough facility, air and water emissions are measured for the presence of uranium and results show the 1160 Monaghan Road facility is a near-zero emissions plant.

Airborne and liquid effluent discharged from a fuel fabrication facility like BWXT are regulated by concentration limits. Action Levels and our own internal limits are set at just a fraction of the Licence Release Limits, which are set by the Canadian Nuclear Safety Commission (CNSC), to keep public exposure to any radiation as low as possible. Although Action Levels are set below Licence Release Limits, exceeding an Action Level is considered a CNSC reportable event in which BWXT must notify the Commission within 24 hours of becoming aware that an Action Level has been exceeded. Accordingly, BWXT has established Internal Control Levels for various radiological and environmental parameters that are set even lower than Action Levels to act as an early warning system. An Internal Control Level exceedance results in internal investigation and corrective and preventive action.

**Water**: Wastewater is generated from routine cleaning activities in the fuel bundle assembly area. The water is held in a drum, filtered and agitated prior to sampling, then sent for independent analysis at an accredited external laboratory. After the wastewater sample result is verified to be below the Internal Control Level of 3 ppm (per batch) and the Action Level of 3 ppm (annual average), the water is discharged to the sanitary sewer. The Action Level is 0.003 g/L (3 ppm (annual average)) and the Licence Release Limit is 0.14 g/L (weekly composite).

Air: The facility performs continuous in-stack monitoring of the single process uranium air emission point, drawing a sample of air across a filter capable of trapping uranium dust. The samples are analyzed by an independent laboratory. The minimum detection limit is 0.01  $\mu$ g uranium. The Action Level is 1.0  $\mu$ g/m³ and the Licence Release Limit is 410  $\mu$ g/m³.

To continue to demonstrate transparency and provide information to the public, BWXT has developed this Environmental Dashboard to provide more detail on our low uranium emissions. This document will be updated throughout the year when new data becomes available.

For more information, please visit the <u>Environmental Monitoring</u> page of our website or refer to our Annual Compliance Reports, a thorough document submitted to the CNSC annually, which can be found on our website here.

If you have any questions, please contact us at questions@bwxt.com or 1.855.696.9588 (toll-free).
